

Sumanth Reddy Burugula Full Stack Developer

✉ sumanth.burugula@gmail.com ☎ 4012343626 📍 Columbus, OH  [LinkedIn](#)

Profile

Proficient Full Stack Developer with 4+ years of experience in designing, developing, deploying web applications. Possess a strong background in Java and Spring Boot, with extensive experience in implementing Hibernate for efficient data management. Skilled in leveraging AWS cloud services, including EC2, S3, and RDS, to deploy and scale applications. Solid understanding of Object-Oriented Programming principles, RESTful APIs, and microservices architecture. Proficient in front-end technologies such as HTML, React.js, and JavaScript, delivering responsive and user-friendly interfaces.

Skills

Front-end Technologies — Angular, React.js, JavaScript, HTML5, CSS3, jQuery, Bootstrap, TypeScript, Next.js

Database Technologies — MySQL, MongoDB, PostgreSQL, SQL Server, Oracle, PL/SQL

Back-end Technologies — Java, Spring Boot, Hibernate, Maven, Micro-services, C/C++, J2EE, JavaFX, JDBC, Node.js, Express.js, Python, GraphQL, MVC Framework, RESTful APIs, Bash, JSP, JPA, Spring Data, ODBC, Java Servlets

Tools and Other Technologies — Git, Visual Studio Code, Docker, Kubernetes, AWS, Heroku, Microsoft Azure, Nginx, Swagger, Postman, Apache Kafka, RabbitMQ, GitHub Action, JUnit, Mockito, Jest, Agile, JIRA, SCRUM, NPM, Tomcat

Others — Power BI, Linux, NUnit, xUnit, MSTest, Selenium, Jest, Moq, MVC, MVVM, Singleton, Repository, SPR

Professional Experience

Full Stack Developer, Fiserv

01/2025 – Present | Columbus, OH, USA

- Developed and maintained backend services using **Java** as part of a core modernization initiative, migrating legacy flat-file data into **DB2** through scalable, RDBMS-based processing pipelines.
- Designed and implemented **Java-based RESTful APIs** to connect UI and backend systems, enabling request-driven, real-time data retrieval from host platforms.
- Built modular, maintainable service components using **object-oriented design principles**, supporting clean architecture and long-term extensibility.
- Integrated Java services with **DB2** by optimizing SQL queries and data access layers to ensure high performance, data integrity, and transactional consistency.
- Collaborated cross-functionally with frontend, backend, and host system teams to deliver end-to-end solutions across **distributed systems**.
- Implemented structured logging, exception handling, and debugging mechanisms in Java services to support production stability and rapid issue resolution.
- Contributed to automated testing, deployment, and production support workflows, ensuring reliable service delivery across multiple environments.
- Followed enterprise security and API governance standards to support secure data exchange between systems.
- Leveraged big data analytics by querying large-scale datasets to assess authentication and risk outcomes, driving data-informed enhancements to challenge decision logic.
- Implemented comprehensive application monitoring using CAL and Splunk for real-time event tracking, debugging, and system health visibility.
- Utilized Datadog for metrics visualization, alerting, and observability, improving reliability and performance of authentication microservices.
- Automated build, testing, and deployment workflows using Harness CI/CD pipelines, ensuring efficient and consistent delivery of authentication services on the Identity Step-Up Platform.

Assistant Professor, Northampton Community college

09/2024 – 12/2024 | Bethlehem, USA

- Taught **C++, Java, OOP, and Data Structures**, emphasizing performance, clean code, and system design.
- Led and mentored **AI/ML research and project work**, guiding students on model development and evaluation.
- Developed a **predictive machine learning model for student performance** using Python and scikit-learn, improving accuracy of performance predictions and providing actionable insights for curriculum optimization.
- Integrated **industry practices** (Git, testing, Agile) into coursework and supervised capstone projects.

Full Stack Developer, NTT DATA(National Life Group)

12/2020 – 07/2022 | Remote, India

- Developed and maintained **Java 8+ and Spring Boot** applications for **annuity and life insurance platforms**, improving client satisfaction by **~20%** through reliable delivery and Agile execution.
- Optimized core application logic and workflows, reducing processing time for critical operations by **~40%** and improving overall system performance.
- Designed and implemented RESTful services and business logic in Java, supported by **unit and integration testing** to ensure production-ready deployments.

- Built and maintained **CI/CD pipelines** using **Maven/Gradle**, enabling consistent, automated builds and deployments.
- Designed relational database schemas and optimized queries in **MySQL**, ensuring data integrity and scalable transaction processing.
- Developed **batch processing workflows and scheduled jobs** using Java frameworks and **AWS Lambda** to support time-critical business operations.
- Leveraged **AWS Lambda** for event-driven architectures, improving scalability and reducing infrastructure costs for variable workloads.
- Gained hands-on experience with **microservices, Docker, and Kubernetes**, contributing to containerized application deployments under senior engineer mentorship.
- Actively participated in **Scrum ceremonies**, collaborating cross-functionally to deliver features on time and continuously improve system quality.

Software Engineering Intern, CareerSoftSolutions

05/2019 – 08/2019 | Hyderabad,

India

- Developed a **scalable Java J2EE application** for production deployment, ensuring high reliability, performance, and scalability under heavy traffic.
- Implemented **JDBC-based database interactions** and optimized queries for efficient data retrieval and processing.
- Applied **modular development principles** and Agile methodologies to enhance maintainability and facilitate rapid iteration.
- Conducted **unit and integration testing** to ensure bug-free functionality and contributed to technical documentation and support workflows.

Education

Master of science, Missouri University of Science and Technology
Computer Science

08/2022 – 05/2024 | Rolla, MO

Bachelor of Technology, Malla Reddy Engineering College for Women
Computer Science and Engineering

08/2017 – 06/2021 | Hyderabad, India

Certificates

- Microsoft Certified: Azure AI Fundamentals AI – 900 by Microsoft ☑

Projects

MarketBasketAnalysis

- Utilized the Apriori algorithm to analyze customer transaction data, identifying frequent item sets and improving recommendation system accuracy by 20%.
- Designed and developed a customized dataset generation pipeline, enhancing data preprocessing efficiency and increasing user engagement by 15%. Collaborated with data scientists to train predictive models on historical user behavior, optimizing algorithm processing time by 30% through performance tuning and resource management.

Decentralized Application for Secure Messaging

- Developed a decentralized messaging platform using the Ethereum Whisper Protocol, enhancing data security and ensuring end-to-end privacy for users. Integrated Web3.shh with the Django framework, enabling real-time secure messaging with an intuitive and responsive user interface.
- By leveraging these technologies, the application aims to deliver a hassle-free experience, allowing users to effortlessly discover, order, and enjoy a diverse range of cuisines.

Smart Banking / Payment Microservices Platform

- Developed a **Java Spring Boot microservices banking platform**, integrating **MySQL, Redis, and JWT authentication** for secure account and transaction management.
- Deployed services on **AWS EC2/RDS/S3**, achieving a scalable, fault-tolerant architecture.
- Optimized backend performance with **Redis caching** and ensured code quality via **JUnit testing**.
- Designed and implemented **RESTful APIs** to enable secure, real-time client-server interactions.
